

In Q3, we continued to advance our five key initiatives: ASHP Collab, Wise Window Hub, LLLC, Next Gen RTUs, and Minnesota Advanced Energy Codes Partnership. Together, these efforts are accelerating momentum toward lasting transformation in Minnesota's building and energy landscape.

## ➤ Windows Market Insight Report: Residential Windows Contractors

This quarter, the Wise Window Hub completed new market research with Minnesota residential window contractors, gathering insights from 39 surveys and 10 interviews. While most contractors are familiar with high-efficiency windows, many still view them as niche due to cost concerns and limited customer demand. These findings highlight opportunities for clearer communication, stronger training resources, and improved support from manufacturers, insights that will shape upcoming WWH tools and education efforts. Stay tuned for more!

## ➤ Case Study: How LLLCs Deliver More Than Basic LEDs

When it came time to replace its outdated lighting system, Intermediate District 287 (ISD 287) sought to improve the quality of the lighting for its employees, save energy, and incorporate more control and flexibility into the system. So, when ISD 287 looked to modernize the lighting system in one of its 60-year-old buildings, the team saw an opportunity to go beyond basic LEDs. A luminaire-level lighting control (LLLC) system was the perfect fit.

## ➤ Promoting Best Practices Cleaning and Servicing an ERV

Next Gen RTUs released a five-minute demonstration video showcasing the step-by-step process of cleaning and servicing an ERV wheel. The team is focused on showcasing practical solutions, giving everyone involved, from contactors to building owners, the tools and confidence to maintain efficiency and performance. Watch and share this resource widely to promote best practices.

## ➤ Video training on demand: Plan Review Checklist

Boost efficiency and accuracy in your code reviews with the Minnesota Energy Code Plan Review Checklist! This one-hour training offers a quick overview of key compliance paths and a hands-on demo of the checklist — showing how to save time, streamline energy code plan reviews, and improve collaboration with design teams.
